

Support Sustainable and
Organic Agriculture

DIG  N.

EDUCATION

We educate the public on sustainable and organic growing practices through conducting and sharing research studies, hosting online resources, organizing on-farm workshops, community gardens, the annual Organic Food & Farming Summit, and much more!

ADVOCACY

We advocate for local, state, and federal policies that support the development of sustainable and organic agriculture. We fight to ensure national organic standards reflect the highest levels of integrity and transparency, and try to balance the needs of both consumers and growers.

CERTIFICATION

FOG's certification program, Quality Certification Services (QCS), offers a wide array of certification options for clients on five continents and in 39 U.S. states, including 200+ in Florida.
